

Michael Nehls The Indoctrinated Brain

Wilson Bryan Key

The Indoctrinated Brain Michael Nehls, 2023-09-19 Global war on the human brain Throughout the world, mental capacity is declining, especially among young people, while depression rates are rising dramatically. Meanwhile, one in forty men and women suffers from Alzheimer's, and the age of onset is falling rapidly. But the causes are not being eliminated, quite the opposite. Can this just be coincidence? *The Indoctrinated Brain* introduces a largely unknown, powerful neurobiological mechanism whose externally induced dysfunction underlies these catastrophic developments. PD Dr. Michael Nehls, medical doctor and internationally renowned molecular geneticist, lays out a shattering chain of circumstantial evidence indicating that behind these numerous negative influences lies a targeted, masterfully executed attack on our individuality. He points out how the raging wars against viruses, climate change, or over national borders are—more likely intended than not—fundamentally providing the platform for such an offensive against the human brain that is steadily changing our being and is aimed at depriving us of our ability to think for ourselves. But it is not too late. By exposing these brain-damaging processes and describing countermeasures that anyone can take, Nehls brings light and hope to this fateful chapter in human history. Nothing less will be decided than the question of whether our species can retain its humanity and its creative power or whether it will lose them irretrievably.

The Indoctrinated Brain: How to Successfully Fend off the Global Attack on Your Mental Freedom by Michael Nehls Md Phd & Naomi Wolf... Summarized, 2024-01-15 This is a summary of the book *The Indoctrinated Brain* which is *Evolution and Human Potential: Navigating Societal Transformation* by Michael Nehls and Naomi Wolf is a compelling exploration of human evolution and its impact on society. The book challenges the idea that humans are a negative force in nature, arguing instead for our potential to evolve into more humane beings. It critically examines how our unique traits like empathy and self-reflection have been exploited by elites for power, leading to cultural missteps. The authors advocate for a reimagined view of human nature, emphasizing the importance of breaking free from cultural indoctrination. They propose building future societies on the principle of inherent human goodness, fostering cooperative coexistence and respecting our natural needs and the environment. This work is a thought-provoking call to embrace our potential for positive societal transformation.

from Michael Nehls's *The Indoctrinated Brain* Is there an ongoing global effort to indoctrinate people by reprogramming their memory? German physician Michael Nehls believes so, and he lays out his case in *The Indoctrinated Brain* (2023). Nehls asserts that global crises such as COVID-19 and climate change may have been created to advance the financial and political goals of a select few. Their technocratic totalitarianism manipulates our brains and suppresses alternative views. Nehls warns of a dystopian future where human life is controlled by computers and algorithms. However, if we embrace our curiosity, innovation, and intelligence, humanity can overcome this crisis.

The Medical-Pharmaceutical Killing Machine Children's Health Defense, 2024-11-26 Medical and pharmaceutical history is replete with examples of dangerous interventions that have poisoned, injured, or killed. However, events since 2020 have attracted attention as never before to medicine's potential to be both lethal and malevolent. In *The Medical-Pharmaceutical Killing Machine*, Children's Health Defense situates current perils in their broader context with the aim of helping readers understand how to protect themselves and their loved ones. In the Greek Trojan War saga, the god Apollo ensured that Cassandra's prophecies would never be believed, with disastrous consequences. As recounted in the book, modern medicine, too, has produced its fair share of "medical Cassandras"—doctors and writers who have tried to warn the public about medicine's life-threatening underbelly, generally to little avail. A chapter dedicated to nine of these medical skeptics, beginning with Ivan Illich and his coining of the term "iatrogenesis" to describe adverse outcomes caused by doctors, weaves a powerful portrait of harms regularly denied and ignored, with those making the claims typically marginalized and "canceled." The book shows that there is no shortage of tools in the killing machine arsenal. One chapter highlights the mRNA vaccine technology inaugurated with COVID, illustrating how this new mechanism for iatrogenesis is inflicting novel forms of toxicity, not all of which are yet understood. Another chapter about assisted suicide and euthanasia describes the chilling global proliferation of policies and propaganda promoting those practices for vulnerable populations that include babies, children, people diagnosed with autism, and the mentally ill. The book also describes factors that make it possible for the killing machine to continue operating with impunity, including the ascendance of an "evidence-based medicine" juggernaut, medical gaslighting, and a ballooning global enforcement infrastructure. Nor does it shy away from confronting what some now characterize as "iatrogenocide"; a chapter asking "Why Do They Do It?" considers money, prestige, and control as three possible answers. Ultimately, it is only by acknowledging the long-standing reality of an all-too-effective medical-pharmaceutical killing machine that people can learn to dodge the threats and work toward building a different model that prioritizes life and genuine health.

GLOBAL BRAIN CHIP & MESOGENS Dr Hildegard Staninger (R) Riet-1, 2016-11-29 It has been predicted by Computer Scientist that within the next twenty years neural interfaces will be designed that will not only increase the power of the humans senses that includes the enhancement of memory and enable one to have a cyberlink - invisible (wireless)

communication with others. There will be a tremendous ethical burden placed upon all of humanity to evaluate the comprehensive issues of safety, informed consent, manufacturer's and scientific communities global responsibility as well as the future for the implanted being. A time for the reflection of what is the term Doing No Harm really mean to mankind as issues of privacy and autonomy become a focal point of life as well as carcinogenic agents entering the brain. Global Brain Chip and Mesogens by Dr. Hildegard Staninger(r), RIET-1 documents the scientific investigation process of chemical analysis and advanced materials compositions in determining the chemical finger print of a Brain Chip. A first of its kind as it will become the pioneering text on this subject matter. Dr. Hildegard Staninger is an Industrial Toxicologist/IH and Doctor of Integrative Medicine. Insatiable Curiosity Helga Nowotny, 2010-08-13 An influential scholar in science studies argues that innovation tames the insatiable and limitless curiosity driving science, and that society's acute ambivalence about this is an inevitable legacy of modernity. Curiosity is the main driving force behind scientific activity. Scientific curiosity, insatiable in its explorations, does not know what it will find, or where it will lead. Science needs autonomy to cultivate this kind of untrammelled curiosity; innovation, however, responds to the needs and desires of society. Innovation, argues influential European science studies scholar Helga Nowotny, tames the passion of science, harnessing it to produce "deliverables." Science brings uncertainties; innovation successfully copes with them. Society calls for both the passion for knowledge and its taming. This ambivalence, Nowotny contends, is an inevitable result of modernity. In *Insatiable Curiosity*, Nowotny explores the strands of the often unexpected intertwining of science and technology and society. Uncertainty arises, she writes, from an oversupply of knowledge. The quest for innovation is society's response to the uncertainties that come with scientific and technological achievement. Our dilemma is how to balance the immense but unpredictable potential of science and technology with our acknowledgement that not everything that can be done should be done. We can escape the old polarities of utopias and dystopias, writes Nowotny, by accepting our ambivalence—as a legacy of modernism and a positive cultural resource.

The Psychology of Totalitarianism Mattias Desmet, 2022-06-23 The world is in the grips of mass formation—a dangerous, collective type of hypnosis—as we bear witness to loneliness, free-floating anxiety, and fear giving way to censorship, loss of privacy, and surrendered freedoms. It is all spurred by a singular, focused crisis narrative that forbids dissident views and relies on destructive groupthink. Desmet's work on mass formation theory was brought to the world's attention on The Joe Rogan Experience and in major alternative news outlets around the globe. Read this book to get beyond the sound bites! Totalitarianism is not a coincidence and does not form in a vacuum. It arises from a collective psychosis that has followed a predictable script throughout history, its formation gaining strength and speed with each generation—from the Jacobins to

the Nazis and Stalinists—as technology advances. Governments, mass media, and other mechanized forces use fear, loneliness, and isolation to demoralize populations and exert control, persuading large groups of people to act against their own interests, always with destructive results. In *The Psychology of Totalitarianism*, world-renowned Professor of Clinical Psychology Mattias Desmet deconstructs the societal conditions that allow this collective psychosis to take hold. By looking at our current situation and identifying the phenomenon of “mass formation”—a type of collective hypnosis—he clearly illustrates how close we are to surrendering to totalitarian regimes. With detailed analyses, examples, and results from years of research, Desmet lays out the steps that lead toward mass formation, including: An overall sense of loneliness and lack of social connections and bonds A lack of meaning—unsatisfying “bullsh*t jobs” that don’t offer purpose Free-floating anxiety and discontent that arise from loneliness and lack of meaning Manifestation of frustration and aggression from anxiety Emergence of a consistent narrative from government officials, mass media, etc., that exploits and channels frustration and anxiety In addition to clear psychological analysis—and building on Hannah Arendt’s essential work on totalitarianism, *The Origins of Totalitarianism*—Desmet offers a sharp critique of the cultural “groupthink” that existed prior to the pandemic and advanced during the COVID crisis. He cautions against the dangers of our current societal landscape, media consumption, and reliance on manipulative technologies and then offers simple solutions—both individual and collective—to prevent the willing sacrifice of our freedoms. “We can honor the right to freedom of expression and the right to self-determination without feeling threatened by each other,” Desmet writes. “But there is a point where we must stop losing ourselves in the crowd to experience meaning and connection. That is the point where the winter of totalitarianism gives way to a spring of life.” Desmet has an . . . important take on everything that’s happening in the world right now.—Aubrey Marcus, podcast host [Desmet] is waking a lot of people up to the dangerous place we are now with a brilliant distillation of how we ended up here.—Robert F. Kennedy, Jr. One of the most important books I’ve ever read.—Ivor Cummins, *The Fat Emperor Podcast* This is an amazing book . . . [Desmet is] one of the true geniuses I’ve spoken to . . . This book has really changed my view on a lot.—Tucker Carlson, speaking on *The Will Cain Podcast*

The Future of the Human Mind: a Study of the Potential Powers of the Brain George Estabrooks, 2017-04-04 An illuminating introduction to the wonders and mysteries of the mind, by the father of modern hypnosis, George H. Estabrooks, covering such subjects as memory stimulation, time distortion, tapping the subconscious mind for creative purposes, mind-body relationships, paranormal and extrasensory perception (ESP), and much more. Dr. Estabrooks was instrumental in bringing the powers of hypnosis to the battlefield, by helping the U.S. military design and develop its hypnosis, remote-viewing, and ESP programs, which allowed the Western powers to stave off crippling Cold War attacks from the Soviet Union and other Eastern Bloc organizations. This excellent book should be required reading for all who wish to gain an introductory and insightful understanding of the human mind... -Dr. Milton V. Kline A popular book written by a psychologist well qualified

The Age of Autism Dan Olmsted, Mark Blaxill, 2010-09-14 A groundbreaking book, *THE AGE OF AUTISM* explores how mankind has unwittingly poisoned itself for half a millennium For centuries, medicine has made reckless use of one of earth's most toxic substances: mercury—and the consequences, often invisible or ignored, continue to be tragic. Today, background pollution levels, including global emissions of mercury as well as other toxicants, make us all more vulnerable to its effects. From the worst cases of syphilis to Sigmund Freud's first cases of hysteria, from baffling new disorders in 19th century Britain to the modern scourge of autism, *THE AGE OF AUTISM* traces the long overlooked history of mercury poisoning. Now, for the first time, authors Dan Olmsted and Mark Blaxill uncover that history. Within this context, they present startling findings: investigating the first cases of autism diagnosed in the 1940s revealed an unsuspected link to a new form of mercury in seed disinfectants, lumber fungicides and vaccines. In the tradition of *Silent Spring* and *An Inconvenient Truth*, Olmsted and Blaxill demonstrate with clarity how chemical and environmental clues may have been missed as medical experts, many of them blinded by decades of systemic bias, instead placed blame on parental behavior or children's biology. By exposing the roots and rise of *The Age of Autism*, this book attempts to point the way out - to a safer future for our children and the planet.

The Polymerase Chain Reaction Kary B. Mullis, Francois Ferre, Richard A. Gibbs, 2012-02-02 James D. Watson When, in late March of 1953, Francis Crick and I came to write the first Nature paper describing the double helical structure of the DNA molecule, Francis had wanted to include a lengthy discussion of the genetic implications of a molecule whose structure we had divined from a minimum of experimental data and on theoretical arguments based on physical principles. But I felt that this might be tempting fate, given that we had not yet seen the detailed evidence from King's College. Nevertheless, we reached a compromise and decided to include a sentence that pointed to the biological significance of the molecule's key feature—the complementary pairing of the bases. It has not escaped our notice, Francis wrote, that the specific pairing that we have postulated immediately suggests a possible copying mechanism for the genetic material. By May, when we were writing the second Nature paper, I was more confident that the proposed structure was at the very least substantially correct, so that this second paper contains a discussion of molecular self-duplication using templates or molds. We pointed out that, as a consequence of base pairing, a DNA molecule has two chains that are complementary to each other. Each chain could then act . . . as a template for the formation on itself of a new companion chain, so that eventually we shall have two pairs of chains, where we only had one before and, moreover, ...

War is a Racket Smedley Butler, 2018-01-19 War Is a Racket is a speech and a 1935 short book, by Smedley D. Butler, a retired United States Marine Corps Major General and two-time Medal of Honor recipient. Based on his career military experience, Butler frankly discusses how business interests commercially benefit (including war profiteering) from warfare. He had been appointed commanding officer of the Gendarmerie during the United States occupation of Haiti, which lasted from 1915 to 1934.

Veils of Distortion John Zada, 2021-02-22 A rare and insightful account by a newsroom insider of how the news skews our perceptions and disorients society 'Fake news' has become a ubiquitous catchphrase and a worldwide obsession. Yet too few of us know that shades of falsehood have always run through the mainstream news media. As news organizations double-down in their efforts to shock and entertain, more people than ever before are tuning-out, disillusioned by negative and manipulative news cycles. In *Veils of Distortion*, John Zada draws on two decades of journalism experience to explain how and why the news has become broken. By depicting our world through a tiny sample of dramatized events that are often far-removed from our experiences, the news warps our picture of reality. What we see is not the world that actually is, but rather a caricature of it: a simple two-toned realm in which dangers and conflicts lurk around every corner. The societal angst that results can make the news a self-fulfilling prophecy, and can turn our minds into prisons of blinkered thought. Zada walks us through the newsroom to reveal these distorting 'veils.' He offers suggestions on how to mitigate the effects of this coarse

infotainment, which, if left unchecked will continue to dumb down and polarize our society, causing it to further unravel.

The Transmission of Epidemic Influenza R.E. Hope-Simpson, 2013-11-11 THE PLAGUE YEARS Mankind has always been fascinated by origins, and biologists are no exception. Darwin is our most famous example. What is the origin of mankind, of species, of infectious diseases? In the last few years we have seen the emergence and spread of some apparently new viruses, such as HIV -1 and the virus causing bovine spongiform encephalomyelopathy. But are these, in fact, entirely new agents, or mutated forms of old viruses that have evolved along with us for eons? Edgar Hope-Simpson could not have written this book at a more opportune moment. He is a firm believer in gradual evolution, rather than the sudden arrival of new agents. I suspect that he would also have a naturalist's Darwinian approach for the origin of AIDS. It has been a source of some amazement to me over the years how even the most innovative scientists conform to a current hypothesis. Pioneer thinking comes more easily to persons outside the scientific mainstream. Edgar Hope Simpson has always struck me as a modern-day naturalist of the classic style, observant and perhaps a little maverick in line of thought. Certainly, the central hypothesis propounded in this book will be controversial to many scientists. From his unique citadel, the Epidemiological Research Unit in Cirencester, he has carefully reexamined mortality data from old records as well as new.
